

Patient Name:	Priya Nair	Referring Physician:	Dr. Dr. Mehta
Patient ID:	P-2026-0002	Scan Type:	Mammogram Screening
Age / Gender:	Age unknown • Female	Indication:	Diagnostic Evaluation & Screening
Date of Scan:	2026-09-13	Report Date:	2026-09-13 16:37 UTC

2. CLINICAL SUMMARY

Clinical inputs and history documented for Breast screening.

Age:	45	Density:	dense
------	----	----------	-------

3. IMAGING FINDINGS

Imaging evaluated for focal lesions, parenchymal symmetry, architectural integrity, and tissue density.

- No significant features (16%)

AI focus area: see digital report

4. AI AND CLINICAL ASSESSMENT

Component	Result	Interpretation
AI Image Model (ResNet-50 Binary Classifier)	0.155	ResNet-50 visual analysis demonstrates predominantly benign parenchymal features (16% confidence risk score).
Clinical Formula (Modified Gail Model)	0.100	Low risk tier (score: 0.10). Clinical inputs demonstrate baseline epidemiological risk with negative genetic and family indicators.
Fusion (Weighted Average)	0.133	Risk Level: LOW (correlate with annual routine screening).

5. FINAL RISK ASSESSMENT

Final Risk Assessment: LOW

Multimodal findings correlate with identified clinical parameters. Review recommended clinical follow-up.

6. RECOMMENDATIONS

- Consult attending physician for clinical correlation and diagnostic review.

AI Clinical Insight: Multimodal synthesis integrates computer vision detection with guideline-based formulas.

7. CONFIDENCE AND LIMITATIONS

AI Confidence: High (85.0%)

- Consistent clinical parameter inputs
- Visual pattern agreement across diagnostic layers
